

# Charisma™ Light Box - LED Replacement

1. Unplug or turn off the light box (not shown).
2. If possible, take a picture of the full light box with your phone so you see how it is wired, before removing any lights (not shown). Take note of what each light strip is plugged into. Note that many lights are only plugged in on one side.
3. Unplug the first non-working light strip male/female connectors at each end.
4. Remove knobs from light strip, then remove the light strip. Glides remain in the frame channel.
5. Loosen the glides from the new light strip to form a gap between the glide and the light strip, but do not remove the knobs.
6. Align the glides with the channel of the frame, then place the glides into the frame channel.
7. Re-snap the connections as on previous light. Remember one side may not connect to anything.
8. Fully tighten all **THREE** knobs.
9. Repeat step 3 to 8 with each non-functioning light.
10. Plug in or turn on the light box (not shown).
